

570-08 Temporary Rock Berm for Sediment Control

(This section last updated 05-09-17)

This detail is intended for use with work areas adjacent to or in the water.

Silt fence should still be installed along the banks if room is available and installation is possible.

Floating silt fence can be used with this detail, but not in place of it. The DNR does not consider floating silt curtain as a primary form of erosion control.

Quantities are placed in Tabulation [100-23](#). See Table 2 in Section [1B-4](#) for Erosion Stone density.
